PREFACE

THE tables (Nos. 1 to 11) of retail prices of food-grains and salt contained in Part I of this volume, and printed on pages 2 to 89, are compiled from half-monthly statements received from most districts in India which are published regularly in the *Gazette of India*.

The districts are grouped with reference to their climatic character and rainfall, and for each such group, as well as for each province, an annual and a quinquennial average has been struck. The quinquennial averages are given in separate tables (Nos. 12 to 22), pages 90 to 128.

Table No. 33 in Part I (pages 160 to 167) gives the prices of the most important food-grains at twenty-three stations in different provinces of the country, the stations being selected to give a fair indication of the general level of prices throughout each province.

The tables numbered 35 to 38 in previous issues of this volume (quinquennial average prices of food-grains and provisions in selected districts of Western India), have been omitted, as many of the quotations prior to 1891 were proved to be inaccurate and most of the prices subsequently recorded are to be found elsewhere in this volume. The price statements from which these tables were prepared are still published monthly in the *Bombay Gazette*.

The record of wholesale prices in Part II (tables 35 to 48) is a compilation from the price-current of the Chamber of Commerce, for Calcutta; from various statements, for Bombay, Karáchi, Madras, and Rangoon; from the *Economist*, for London; and from official statements. Four articles, namely, cotton, jute, tobacco, and turmeric, have been added to table No. 44.

Tables Nos. 49 to 53 in Part III are a record of wages in selected districts of each province, in certain State railways and Government establishments, and in some industrial establishments in various parts of the country.

Retail prices are expressed in India generally, and in Part I of this volume, in terms of the number of sers sold for a unit of money, namely, one rupee. To assist in translating this expression into the amount in money paid for a unit of quantity, a table is prefixed to the volume stating the equivalent of "sers per rupee" in "annas per ser" (one anna being the sixteenth part of a rupee).

J. A. ROBERTSON

*Officer on special duty in the Department
of Commerce and Industry*

August 8, 1905

CONTENTS

PART I—RETAIL PRICES

Table of Equivalents	Page v—vii
Average annual prices of Food-grains and Salt (1861—1904) :	

	Page		
No. 1—Rice (common)	2—13	No. 7—Kangni or kakun	50—53
„ 2—Wheat	14—23	„ 8—Gram	54—63
„ 3—Barley	24—29	„ 9—Maize	64—69
„ 4—Jawar or cholum	30—37	„ 10—Arhar or thur	70—77
„ 5—Bajra or cumbu	38—45	„ 11—Salt	78—89
„ 6—Marua or ragi	46—49		

Quinquennial averages deduced from the figures in tables Nos. 1 to 11 :

No. 12—Rice (common)	90—94	No. 18—Kangni or kakun	110—111
„ 13—Wheat	95—98	„ 19—Gram	112—116
„ 14—Barley	99—100	„ 20—Maize	117—119
„ 15—Jawar or cholum	101—104	„ 21—Arhar or thur	120—123
„ 16—Bajra or cumbu	105—107	„ 22—Salt	124—128
„ 17—Marua or ragi	108—109		

Variations in the quinquennial averages in tables Nos. 12 to 22, the prices for 1871-75 being taken as 100 :

NOTE.—In this table, the variations in the prices of gold (measured in silver) are arrived at by multiplying the price of bar silver in London in 18 (=59½ d.) by 100 and dividing the product by the price of bar silver in the particular year

Example—

Price of silver in 1899=27½ d. (table No. 41); price of silver in 1873=59½ d.; price of gold in 1873=100. The variation in the price of gold in 1899 is then worked out thus—
 $27\frac{1}{2} : 59\frac{1}{2} :: 100 : 215$

The variations in the prices of the other articles in this table are calculated thus: As the variation in the price of gold in table No. 42 is to the variation in the price of gold in this table, so is the variation in the price of the article in table No. 42 to the variation required

Example—

Variation in the price of gold in table No. 42=100; variation in the price of gold (measured in silver) in 1899, in this table=215; variation in the price of copper (measured in gold) in 1899=86 (table No. 42). Therefore
 $100 : 215 :: 86 : 185$

No. 44—AVERAGE ANNUAL WHOLESALE PRICES of FOOD-GRAINS and OTHER ARTICLES —(Prices are stated in rupees and decimals of a rupee per ten maunds for all articles except Live-Stock)

RICE (husked)

PART III

WAGES

NOTE

The statistics of wages presented in table 49, and its subsidiary tables 50 and 51, are compiled from half-yearly returns purporting to show for each district the average for the preceding six months of the wages per month of certain labourers and artizans. By far the most important class of labour is agricultural, and the record obtained entirely fails to give a reliable indication of the remuneration of the labourers. This result is due to the inherent difficulties of the problem, and the practical impossibility of getting the untrained reporting agency to make the necessary allowances for the varying conditions of employment. Payment in kind is commonly practised, either for the entire wage, or as a supplement to cash wages, and the supplements vary according to the season and the nature of the employment. The regularity of employment also varies greatly, and employment is practically nowhere continuous throughout the year. The most common expedient for avoiding these, and other difficulties, is to return cash wages for labourers employed in towns, or their neighbourhood, which are in no way typical of the rates prevailing throughout the district. The same difficulties are also encountered in collecting information as to the wages earned by village artizans, and the results are further vitiated by assuming that masons, carpenters, and blacksmiths necessarily earn the same wages. The wages of horse-keepers are recorded with the least inaccuracy, but even if they are taken as typical of the wages of domestic service generally, the class represented is unimportant.

The selection of the districts, for which figures are published in the tables, is also faulty, as the districts are not typical of tracts having similar economic conditions, but are those originally selected according to their climatic character and rainfall for making returns of the prices of food-grains.

Measures are now being taken to replace the present faulty returns by more scientific methods of investigation, whose object will be to ascertain the standard rates of wages in each district or homogeneous tract, and to observe permanent changes in those standard rates as distinct from short period fluctuations.

[Where no rates are

(10)—Monthly wages (in Rs) in a Mill in Northern India

(a) Unskilled labour (in one of the Departments)

Years	Rate of Wage	Years	Rate of Wage	Years	Rate of Wage
1877	4'75	1887	5'18	1897	4'87
1878	4'11	1888	5'14	1898	4'87
1879	4'26	1889	5'2	1899	5'69
1880	4'2	1890	5'25	1900	5'69
1881	4'54	1891	5'64	1901	5'69
1882	4'7	1892	4'87	1902	5'69
1883	4'94	1893	4'87	1903	6'09
1884	4'82	1894	5'52	1904	6'09
1885	4'92	1895	4'87	1905	6'09
1886	5'21	1896	4'87		

The manager of the mill explains:

"The rate for 1877 appears to be abnormal, probably because there were few employes and the mill had only recently started. If the wages of one or two men more highly paid than the others be left out, the rate is Rs 4-3."

(b) Skilled labour (in January of each year)
